

Vienna, 11.3.2015

Since June 2014 our laboratory is using the Cellsprint harvester six days a week, performing two full runs (24 samples) per day without any technical problems. After one-week installing, instruction and training of our laboratory members we have tested the Cellsprint harvester for two weeks. Minimal hands-on time, easy and flexible handling and sometimes even better quality of metaphases compared to manual metaphase preparation satisfied us. The Cellsprint harvester is reliable and standardized and turned out to be great and essential support. So we fully recommend the 24 Cellsprint harvester for supporting your cytogenetical work.
